PROFESSIONAL SUMMARY

AI Developer with hands-on experience building and deploying ML and deep learning solutions, including NLP chatbots, computer vision systems, and predictive models. Skilled in Python, TensorFlow, and SQL across the full ML lifecycle: data preprocessing, model development, evaluation, and deployment. Track record of shipping functional, end-to-end AI applications independently and in team settings.

TECHNICAL SKILLS

- **Languages:** Python, C, R, SQL
- **AI / ML Technologies:** TensorFlow, Scikit-learn, CNN, RNN, SVM, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, Natural Language Processing (Intent Recognition, Dialogue Management), Knowledge-Base Grounded Chatbots, OpenCV, face_recognition, dlib, Image Processing, Face Detection & Recognition, Model Evaluation.
- **Web & Mobile:** Flask, PHP, REST APIs, Android Studio (Java), MVC Architecture
- **AI Systems:** RAG Pipelines, Offline/On-Device LLMs, Vector Databases (VectorDB), AI Chatbots, Enterprise Knowledge Retrieval
- **Databases & Tools:** MySQL, GitHub, Jira
- **Core Concepts:** Data Preprocessing, Exploratory Data Analysis (EDA), Feature Engineering, Model Evaluation, Prompt Engineering, Database Design, Agile Development

PROFESSIONAL EXPERIENCE

AI/ML Intern — Medha Tech Solutions [LINK] *Sep 2025 – Nov 2025*

Bengaluru, India

- Developed and enhanced **MIRA**, an AI-powered domain-restricted chatbot that leverages **Retrieval-Augmented Generation (RAG)** principles to generate accurate, context-aware responses exclusively from organization-specific knowledge bases, significantly reducing hallucinations while ensuring reliable and source-grounded answers in an Agile development environment using Jira and GitHub.
- Engineered core backend features including knowledge base management, chatbot configuration, conversation history, user authentication, and role-based administration using **PHP, MySQL, REST APIs**, and **GitHub**, while building an admin dashboard to manage chatbot instances, branding, subscriptions, and user access.

PROJECTS

Offline RAG-Based AI Assistant [LINK] *Python, Local LLMs, RAG*

- Built a fully offline AI assistant using on-device **LLMs** and **Retrieval-Augmented Generation (RAG)** to answer questions and generate insights strictly from a company's private knowledge base.
- Designed for enterprise use across IT, healthcare, and education (e.g., auto-generating quiz/question papers from course material), with all inference running on-premise for complete data security and zero external API calls.

Banking Chatbot System [LINK] *Python, NLP*

- Built an AI-powered banking chatbot with intent recognition and dialog management that automated over **75%** of routine customer queries, reducing manual query handling by over **50%.**
- Optimized response accuracy and latency through **iterative testing** and **model tuning**, ensuring reliable performance under real-world query variations.

Face Recognition Gate System [LINK] *Python, OpenCV, dlib*

- Engineered a real-time biometric access control system using **OpenCV** and **dlib's HOG/CNN** detection with **128-D face embeddings**, achieving **98%** identity match accuracy.
- Designed a live webcam-based detection loop capable of identifying registered residents in real time and simulating gate-open/access-denied responses based on match confidence.

Other Projects *R, C, MySQL*

- **House Price Prediction**: regression model on 1,500+ data points across 5 features, achieving an RMSE of 1.25.
- **Hotel Management System**: relational database handling 100+ bookings and 250+ check-in/check-out transactions.

EDUCATION

Master of Computer Applications (MCA) — CMR University *2024 – 2026*

B.Sc. Mathematics — Subodh PG Autonomous College *2020 – 2023*

CERTIFICATIONS

- AI Fluency — Anthropic
- Claude 101 — Anthropic
- The Joy of Computing using Python — NPTEL, IIT Madras (Elite, 71%)
- Deep Learning with TensorFlow — IBM
- Introduction to Generative AI — Google Cloud Skills
